

## CLAIM

What is claimed is:

1. A case with randomly adjusting handle comprising:

a case;

5 a shell having a hollow body and an opening at the top, and comprising a button depositing in the opening;

a frame depositing in the hollow body of shell and having two ears depositing the proper position and in the opposite direction for fastening on the shell which can move in the vertical direction, and having a pivotal  
10 hole in the bottom wherein the frame is in the bottom of button and connects to;

a fastening member fastening on the case and having a hole, wherein a spring deposits between the frame and the fastening member;

a positional member depositing under the fastening member and  
15 having a hole in the center;

a sleeve screwing on the fastening member and positional member and fastened on a channel of two connecting members; and

a removable member, in the bottom of sleeve, having a strip in the center which passes the sleeve, fastening member and spring to  
20 pivotally couple to the pivotal hole of frame, and two pins surrounding the strip;

wherein the removable member could move down when pressing the button of shell makes the spring compressed and the frame moving down, and turning a direction of the shell and then releasing the button  
25 results in the removable member and frame been back by the spring, and the removable member is fastening by two pins placing in a room of

case.

2. The case with randomly adjusting handle of claim 1, wherein the button before using embeds in the opening and the surface of frame is smooth.
- 5 3. The case with randomly adjusting handle of claim 1, wherein the room of case is for placing two pins and the size of it is larger than the removable member for placing when the removable member moves down.
4. The case with randomly adjusting handle of claim 1, wherein the  
10 frame is a handle of case.
5. The case with randomly adjusting handle of claim 4, wherein the handle could move in the horizontal direction.
6. The case with randomly adjusting handle of claim 4, wherein the handle could spin.
- 15 7. The case with randomly adjusting handle of claim 1, wherein the shape of removable member is like "W".
